

# Dreamweaver: Creating a Status Bar Message

The Status Bar is located at the bottom left of your Browser Window and displays both a default message and the URL for any links the user mouses over.

## Step 1: Creating a Status Bar

1. Begin with either a new document or an existing one you'd like to apply the Status Bar Message to. Use the Index page of your web photo album.
2. With the Behavior panel open, select the (+) plus sign. Select **Set Text>Set Text of Status Bar**. **Note the Behavior Panel can be located under Windows on the menu bar.**
3. The Set Text of Status Bar dialog window will open. Enter any text you would like to have displayed. (ex: **Welcome to My Site!**) Click OK when you're finished.

## Step 2: Testing Your Page

Preview In Browser by hitting F12 and look at the Status Bar message.
