

Fireworks: Faded Image

Use the Faded Image command to fade selected sections of a photo. This is a great tool to use when applying text on a photo.

1. Open Fireworks and start with a 400 by 400 canvas with a transparent background.
2. Go to File>Import and navigate to a photo previously saved.
3. Draw out the image within the canvas by moving the mouse to form a rectangle. Release the mouse to insert the photo. Be sure your photo is selected and shows the blue outline!
4. Select **Command** from the menu bar and select **Create** and choose **Fade Image**.

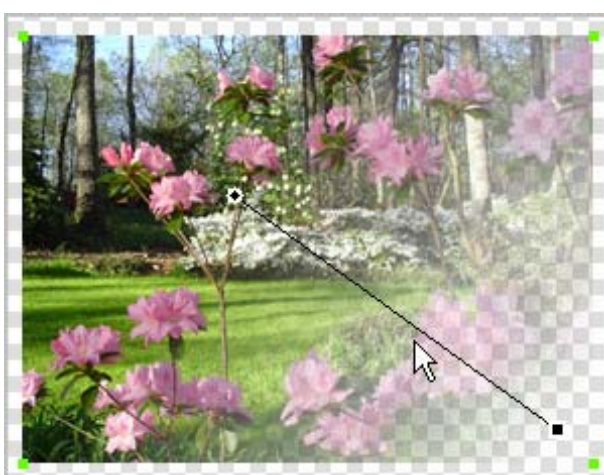

Figure 3

5. You can move the line to change the orientation of the fading as shown in Figure 3.

Note: Add text to faded areas to provide information.
